Leonardo da Vinci

Máquina de volar de Leonardo

Leonardo was motivated to discover how birds continuously soar in order to use this information for developing human flight.

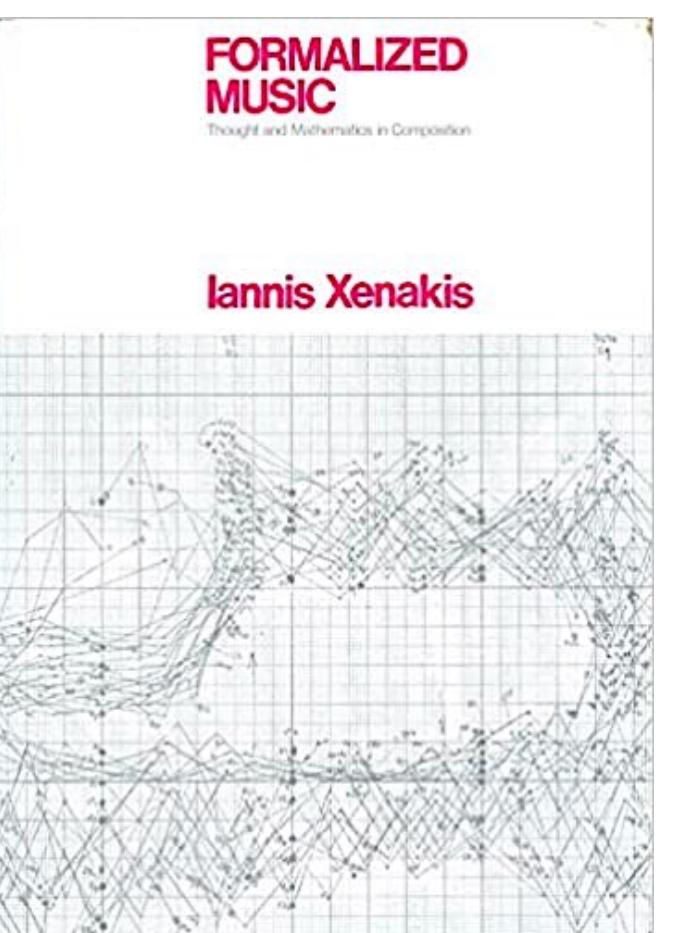

I find a beautiful link between stochastic processes and fuzzy logic (probability and uncertain

Pithoprakta is an example of a stochastic work. Stochastic processes are those which have a random probability distribution that may be analyzed statistically, but never predicted precisely. Examples include bacterial growth patterns, electrical current fluctuation, and—in the case of *Pithoprakta*—the movement of particles within a fluid. *Pithoprakta*, composed in 1955, is for 49 musicians—2 trombones, xylophone/woodblock, and 46 strings—where each instrument is conceived as an independent molecule following the Maxwell-Boltzmann distribution law. This law describes the probable velocity ranges of particles moving within an idealized gas at thermodynamic equilibrium. These ranges differ based on the temperature and pressure of the gas. In *Pithoprakta*, Xenakis divides the work into sections each with their own temperature and pressure parameters and calculates the velocity ranges of 1148 theoretical particles, according to the Maxwell-Boltzmann law. He graphed these calculations with the vertical axis representing the speed of the particle and the horizontal axis representing time. An example of this can be seen in Figure 1. These measurements were then connected with lines to show how the velocities change over time based on the temperature/pressure parameters.

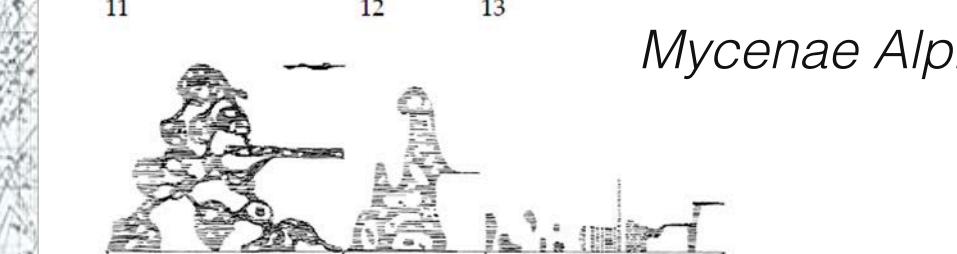

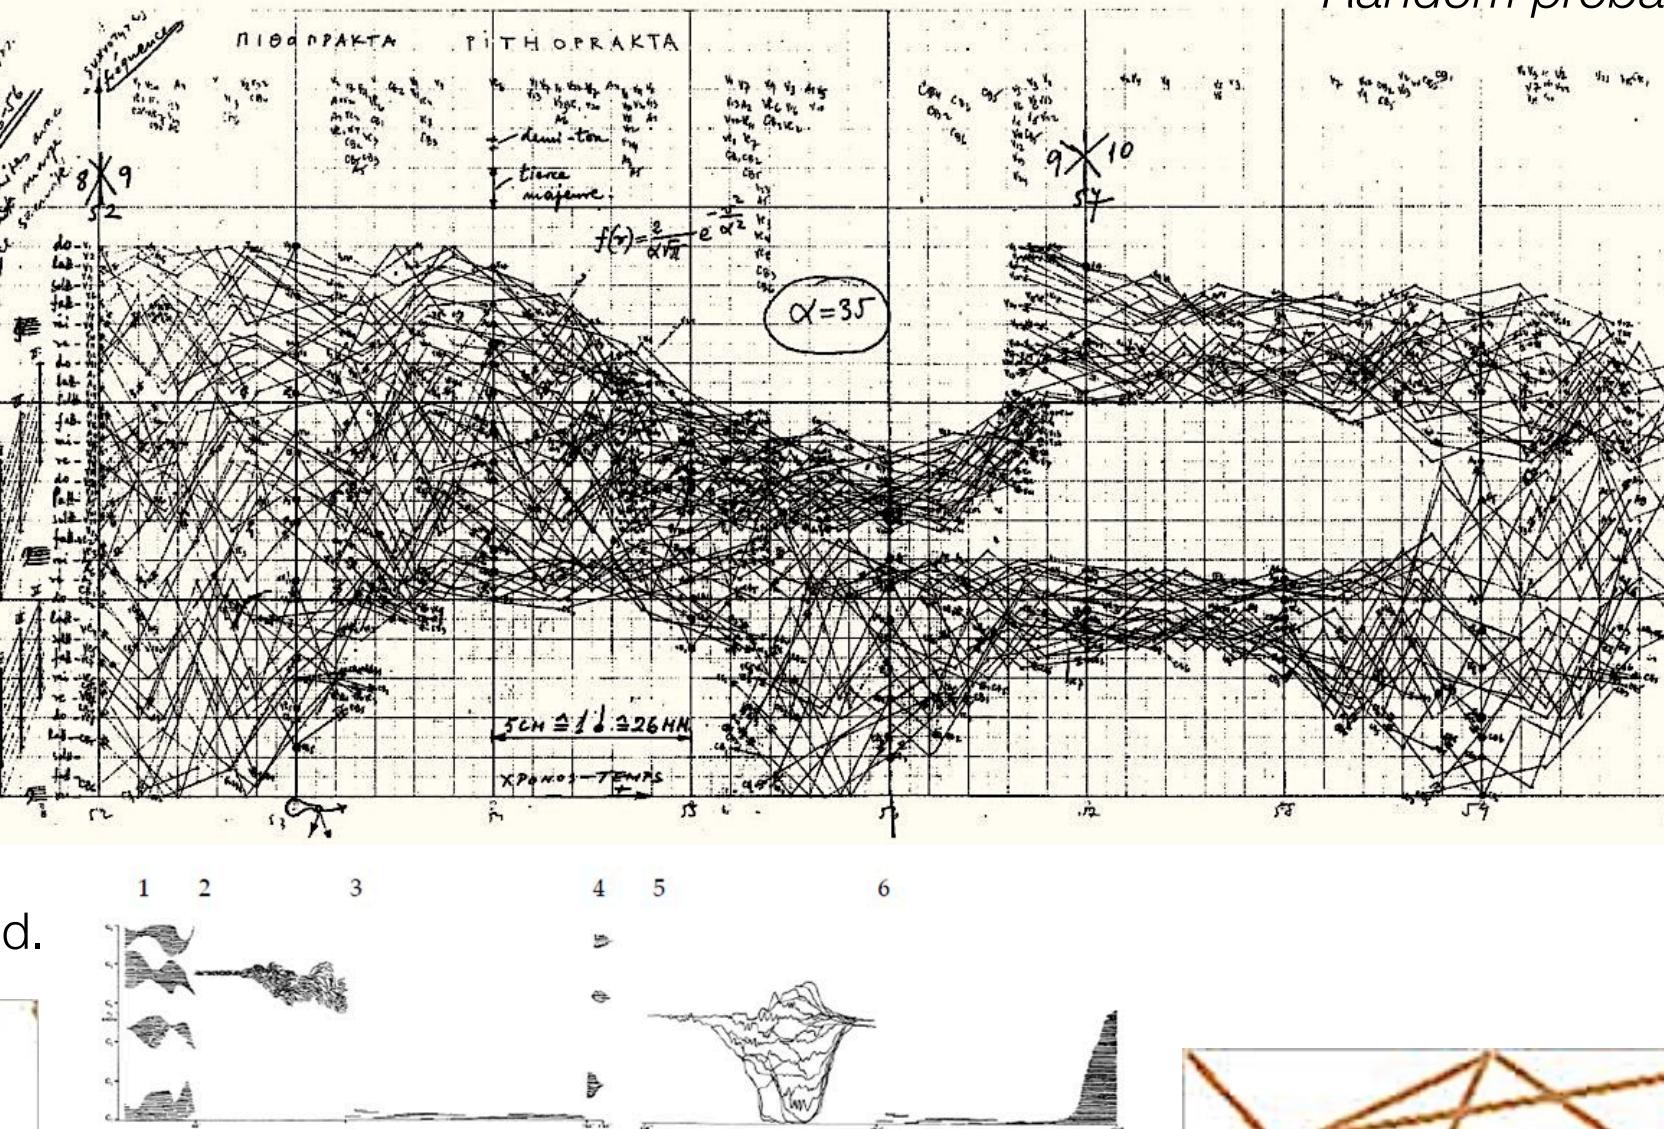

Pithoprakta es un ejemplo de trabajo estocástico. Los procesos estocásticos son aquellos que tienen una distribución de probabilidad aleatoria que se puede analizar estadísticamente, pero nunca predecir con precisión. Los ejemplos incluyen patrones de crecimiento bacteriano, fluctuación de la corriente eléctrica y, en el caso de *Pithoprakta*, el movimiento de partículas dentro de un fluido. *Pithoprakta*, compuesta en 1955, es para 49 músicos - 2 trombones, xilófono / bloque de madera y 46 cuerdas - donde cada instrumento se concibe como una molécula independiente siguiendo la ley de distribución de Maxwell-Boltzmann. Esta ley describe los rangos de velocidad probables de las partículas que se mueven dentro de un gas idealizado en equilibrio termodinámico. Estos rangos difieren según la temperatura y la presión del gas. En *Pithoprakta*, Xenakis divide el trabajo en secciones, cada una con sus propios parámetros de temperatura y presión y calcula los rangos de velocidad de 1148 partículas teóricas, de acuerdo con la ley de Maxwell-Boltzmann. He representado gráficamente estos cálculos con el eje vertical que representa la velocidad de la partícula y el eje horizontal que representa el tiempo. Un ejemplo de esto se puede ver en la Figura 1. Estas mediciones se conectaron luego con líneas para mostrar cómo cambian las velocidades con el tiempo en función de los parámetros de temperatura / presión.

How slow the Wind

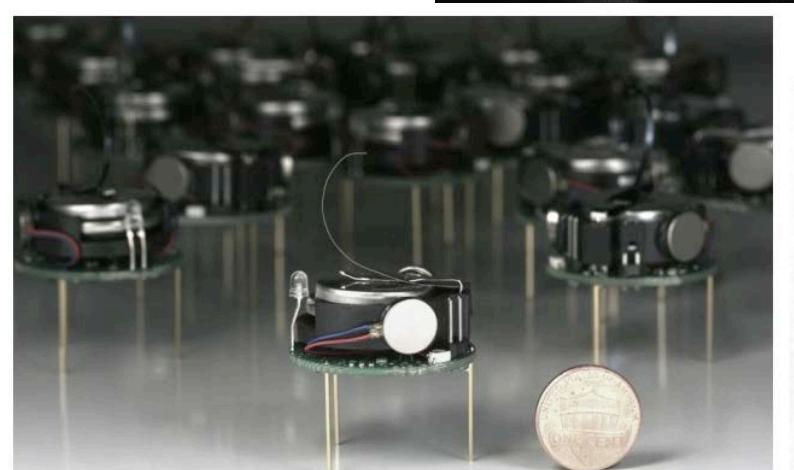

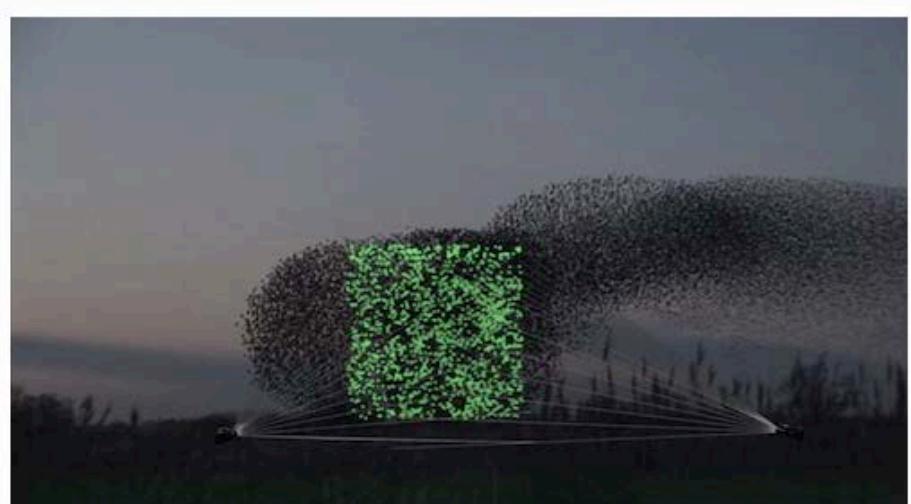

Histograms demonstrating the positional infidelity for each northern bald ibis in the V formation during the migratory flight. The grey shaded V shape behind each individual histogram ($n = 14$) denotes the structure for all individuals in the flock (see b). The colour code refers to the duration (in seconds) a bird was present in each $0.25\text{ m} \times 0.25\text{ m}$ grid. Although individual birds showed some bias towards the front, back, left or right regions of the V formation, these positions were not maintained rigidly.

On Salvation by Deeds

by
Jorge Luis Borges

One autumn, one of the autumns of time, the Shinto divinities gathered, not for the first time, at Izumo. They are said to have numbered eight million. Being a shy man I would have felt a bit lost among so many. In any case, it is not convenient to deal in inconceivable numbers. Let us say there were eight, since eight is a good omen in these islands.

They were downcast, but did not show it: the visages of divinities are undecipherable kanji. They seated themselves in a circle on the green crest of a hill. They had been observing mankind from their firmament or from a stone or from a snowflake. One of the divinities spoke:

Many days, or centuries, ago, we gathered here to create Japan and the world. The fishes, the seas, the seven colors of the rainbow, the generations of plants and animals have all worked out well. So that men should not be burdened with too many things, we gave them succession, issue, the plural day and the singular night. We also bestowed on them the gift of experimenting with certain variations. The bee continues repeating beehives. But man has imagined devices: the plow, the key, the kaleidoscope. He also imagined the sword and the art of war. He has just imagined an invisible weapon which could put an end to history. Before this senseless deed is done, let us wipe out men. They remained pensive. Without haste another divinity spoke: It's true. They have thought up that atrocity, but there is also this something quite different, which fits in the space encompassed by seventeen syllables.

The divinity intoned them. They were in an unknown language, and I could not understand them.

The leading divinity delivered a judgment:

Let men survive. Thus, because of a haiku, the human race was saved.

Izumo, April 27, 1984

DE LA SALVACIÓN POR LAS OBRAS

Jorge Luis Borges

En un otoño, en uno de los otoños del tiempo, las divinidades del Shinto se congregaron, no por primera vez, en Izumo. Se dice que eran ocho millones pero soy un hombre muy tímido y me sentiría un poco perdido entre tanta gente. Por lo demás, no conviene manejar cifras inconcebibles. Digamos que eran ocho, ya que el ocho es, en estas islas, de buen agüero.

Estaban tristes, pero no lo mostraban, porque los rostros de las divinidades son kanjis que no se dejan descifrar. En la verde cumbre de un cerro se sentaron en rueda. Desde su firmamento o desde una piedra o un copo de nieve habían vigilado a los hombres. Una de las divinidades dijo:

- Hace muchos días, o muchos siglos, nos reunimos aquí para crear el Japón y el mundo. Las aguas, los peces, los siete colores del arco, las generaciones de las plantas y de los animales, nos han salido bien. Para que tantas cosas no los abrumaran, les dimos a los hombres la sucesión, el día plural y la noche una. Les otorgamos asimismo el don de ensayar algunas variaciones. La abeja sigue repitiendo colmenas; el hombre ha imaginado instrumentos: el arado, la llave, el calidoscopio. También ha imaginado la espada y el arte de la guerra. Acaba de imaginar un arma invisible que puede ser el fin de la historia. Antes que ocurra ese hecho insensato, borremos a los hombres.

Se quedaron pensando. Otra divinidad dijo sin apuro:

- Es verdad. Han imaginado esa cosa atroz, pero también hay ésta, que cabe en el espacio que abarcan sus diecisiete sílabas.

Las entonó. Estaban en un idioma desconocido y no pude entenderlas.

La divinidad mayor sentenció:

- Que los hombres perduren.

Así, por obra de un haiku, la especie humana se salvó.

The Gymnasium Events have been given in basketball courts, using all or parts of different dances, crossing dances where possible, and using as much of the court as would work with a given dance or dances. How to Pass, Kick, Fall, & Run becomes like a game using the circles painted on the court for BASKETBALL (3)

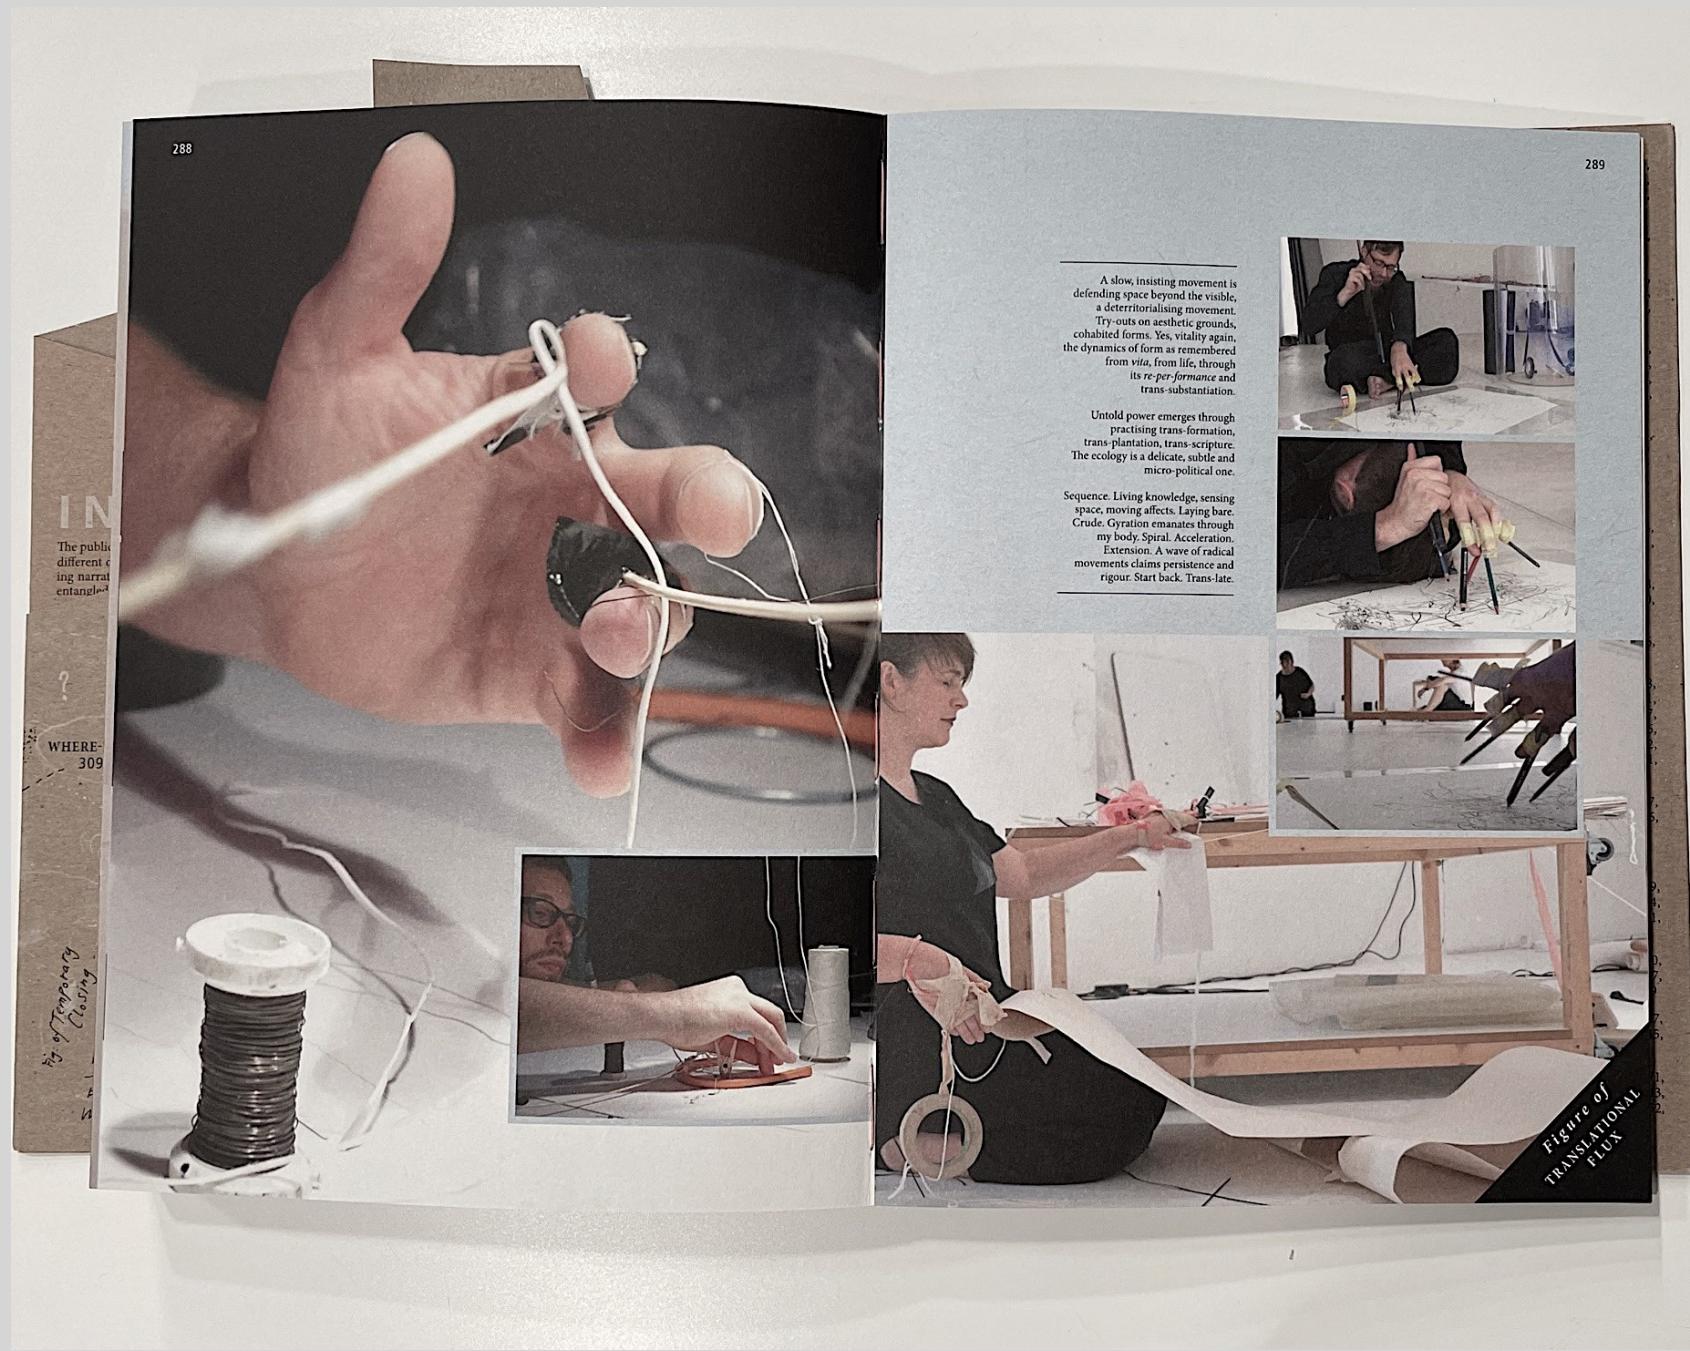

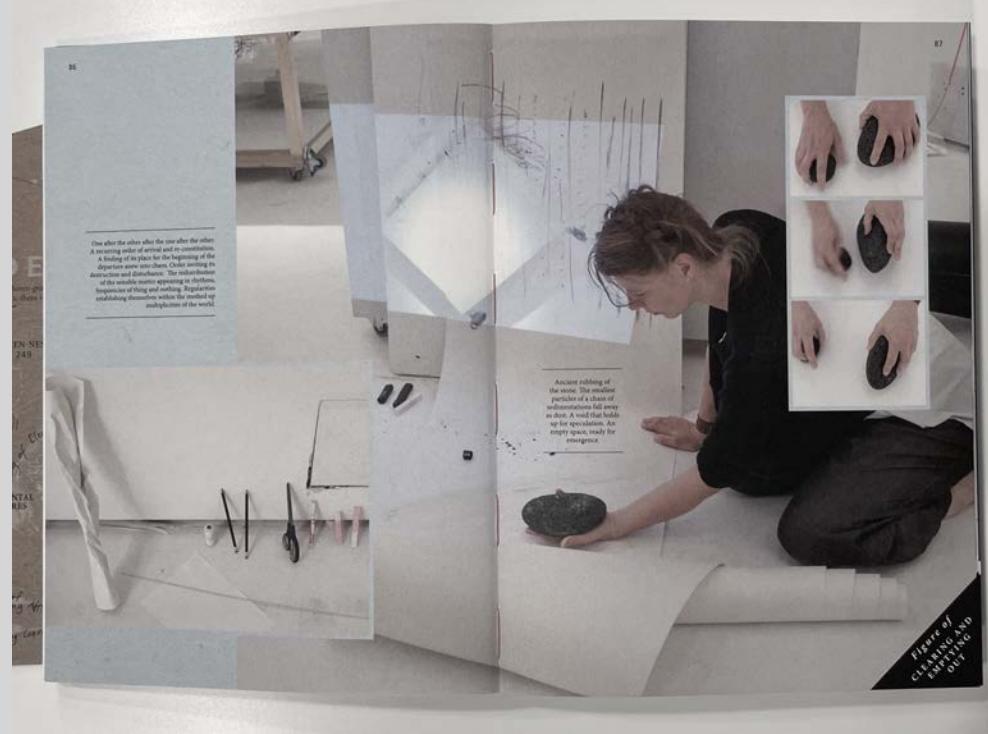

Glenn Gould

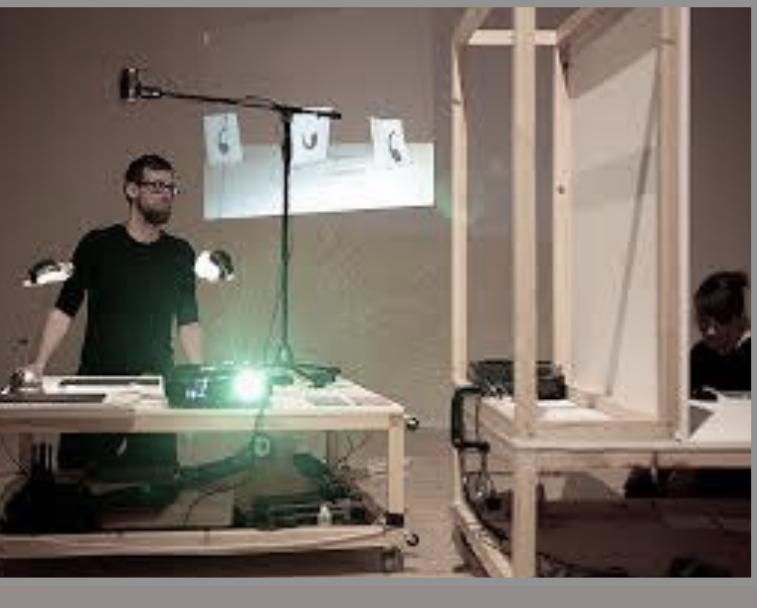

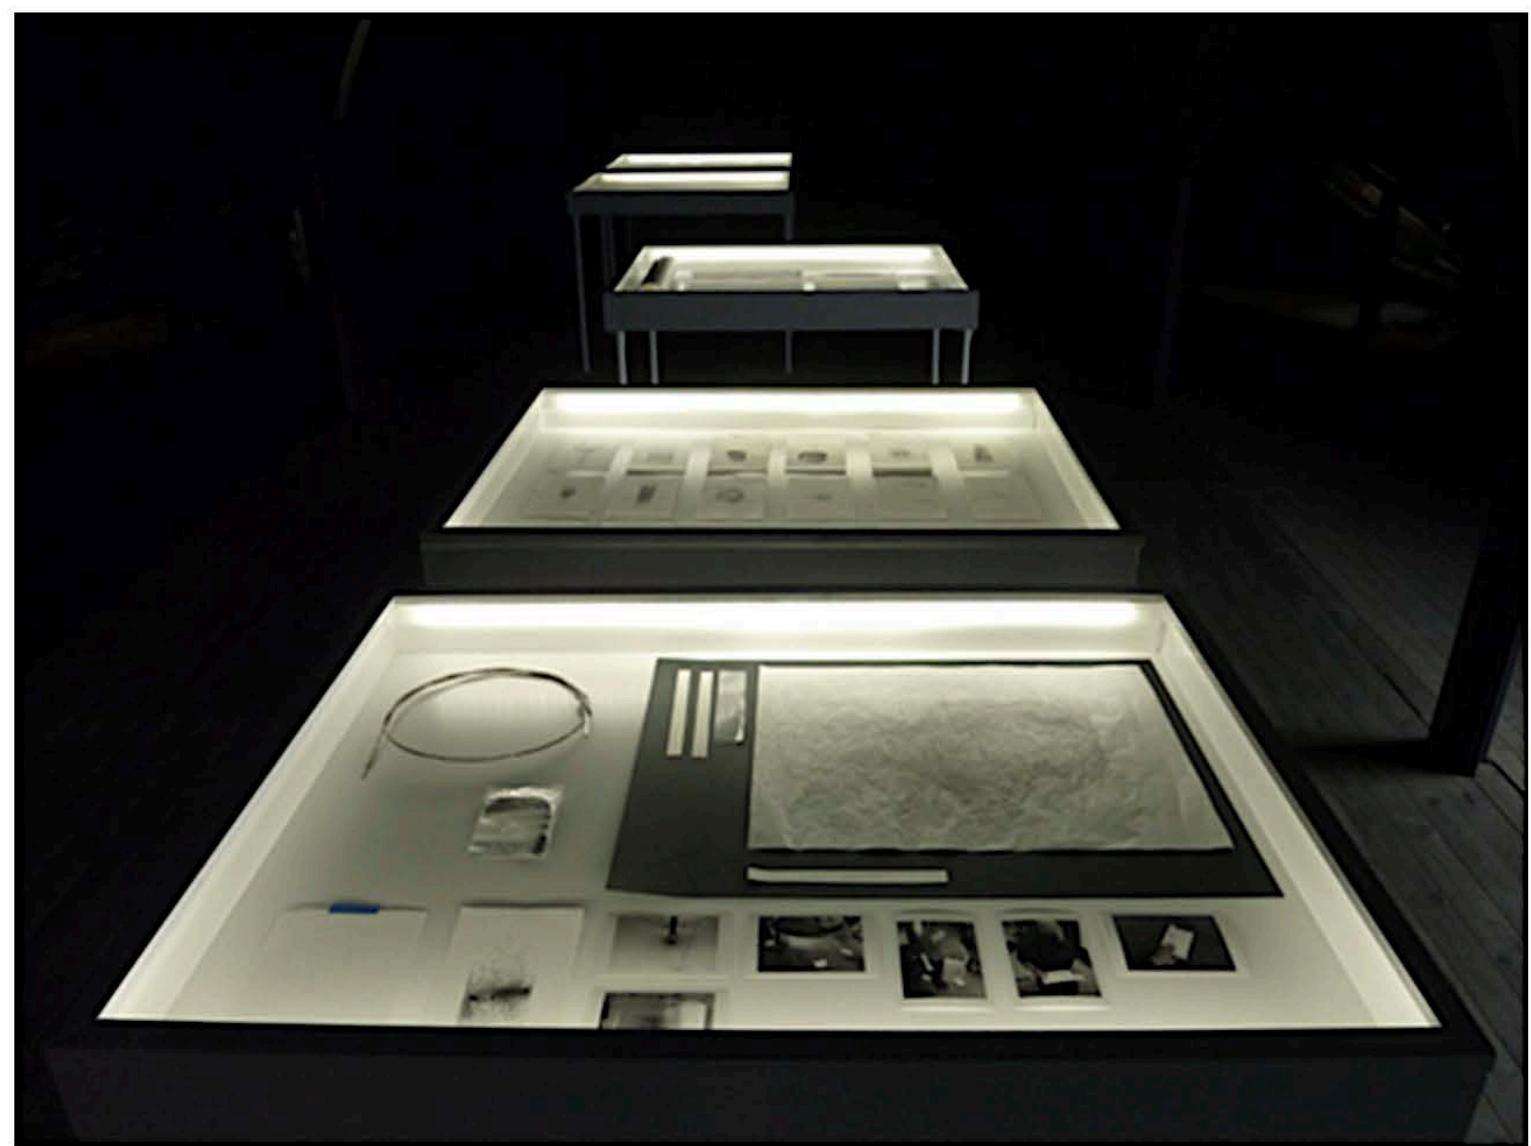

Nikolaus Gansterer

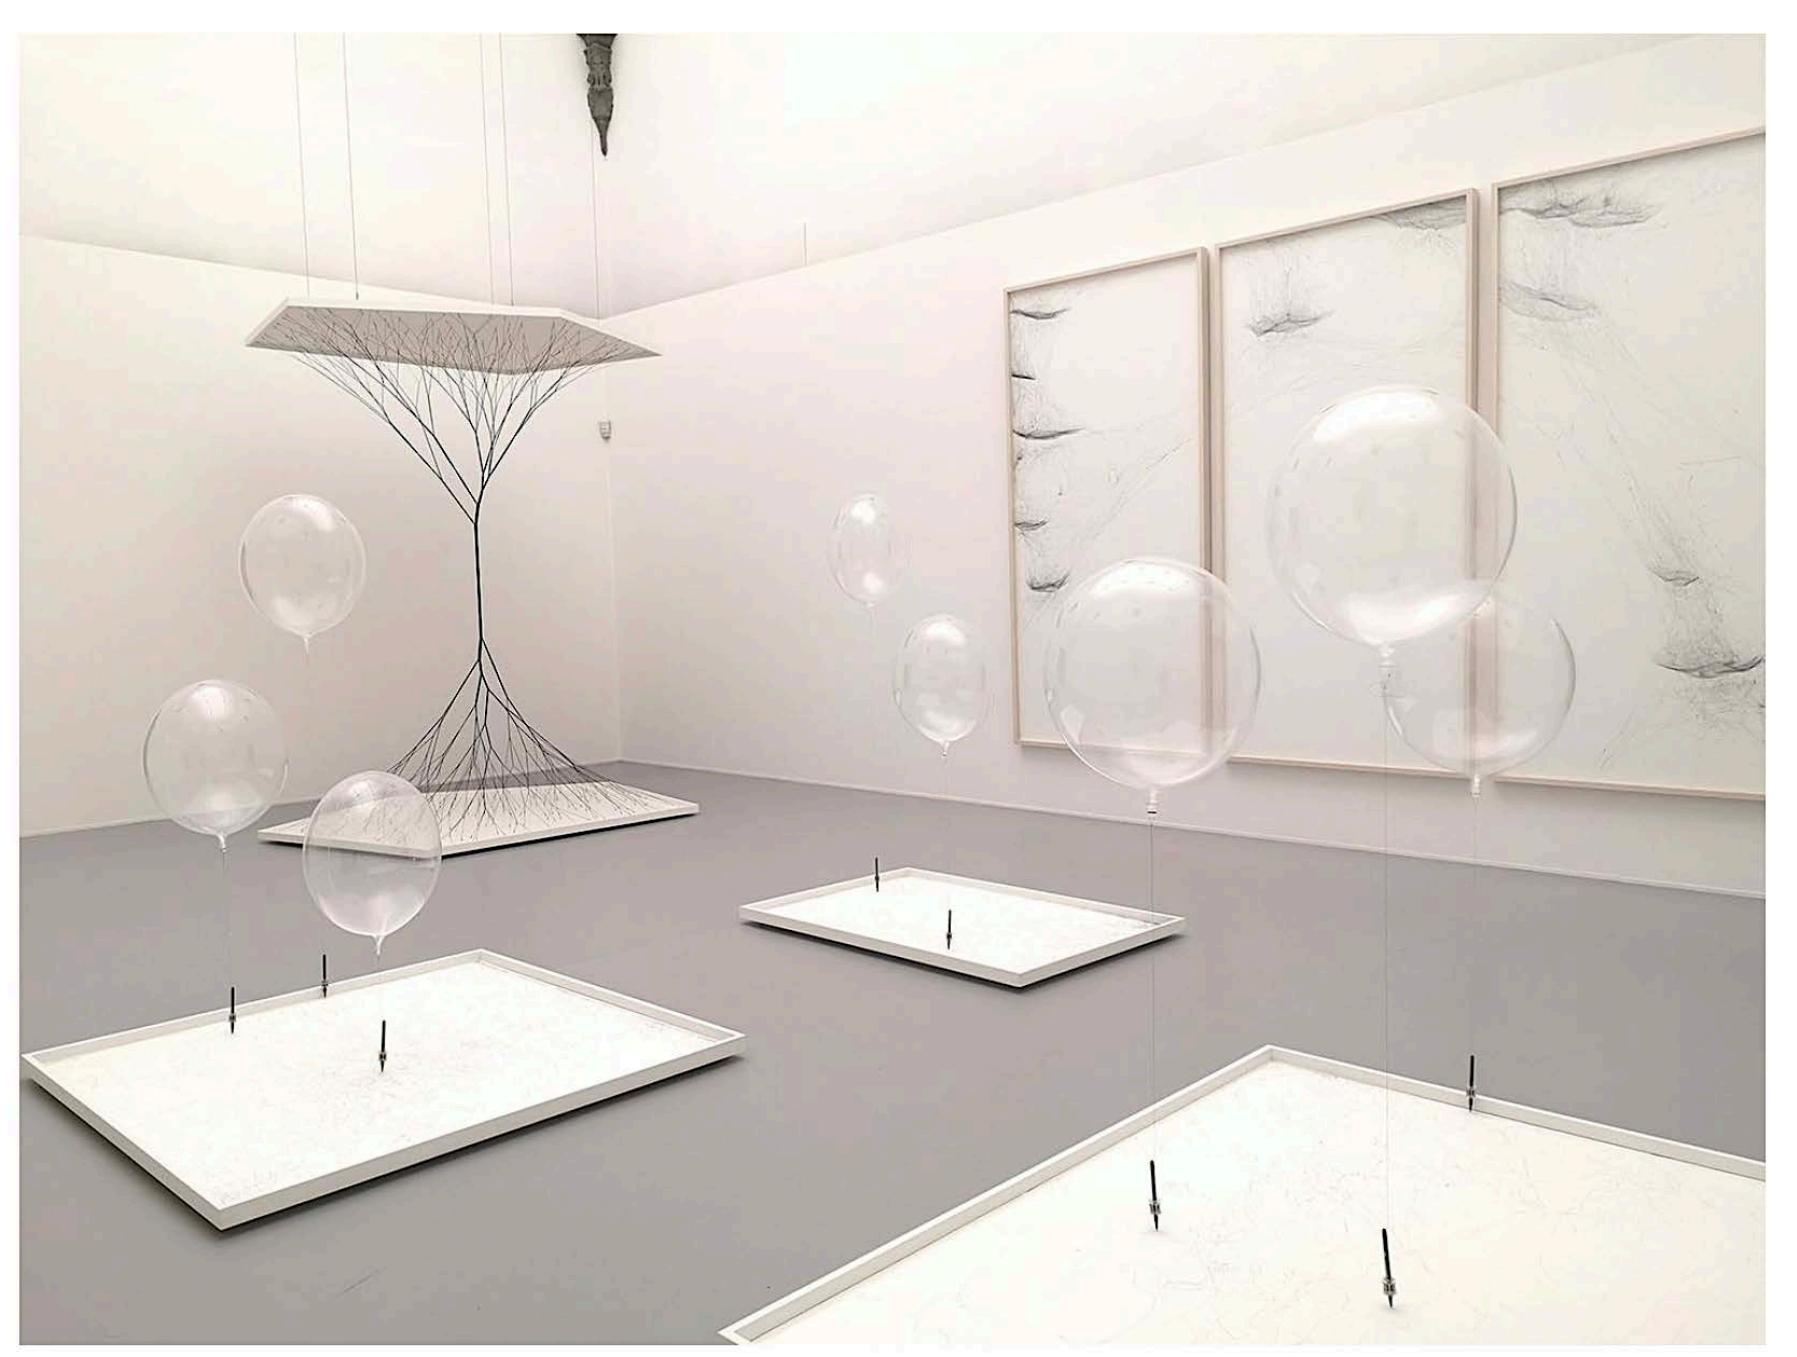

being-in-the-world to which a body is exposed at its physical surface everywhere in the world. Consequently, feeling ‘oneself’ means perceiving oneself as a body touched by others, exposed to others in the middle of the world. One perceives one’s being towards others, towards other human and non-human bodies, together with which one forms a *sensorial field* whenever one feels sensations. Therefore, sensations are not private phenomena. They are forms of *transport* into the world’s world-wide-ness. Pores that provide us with a sensorial — as

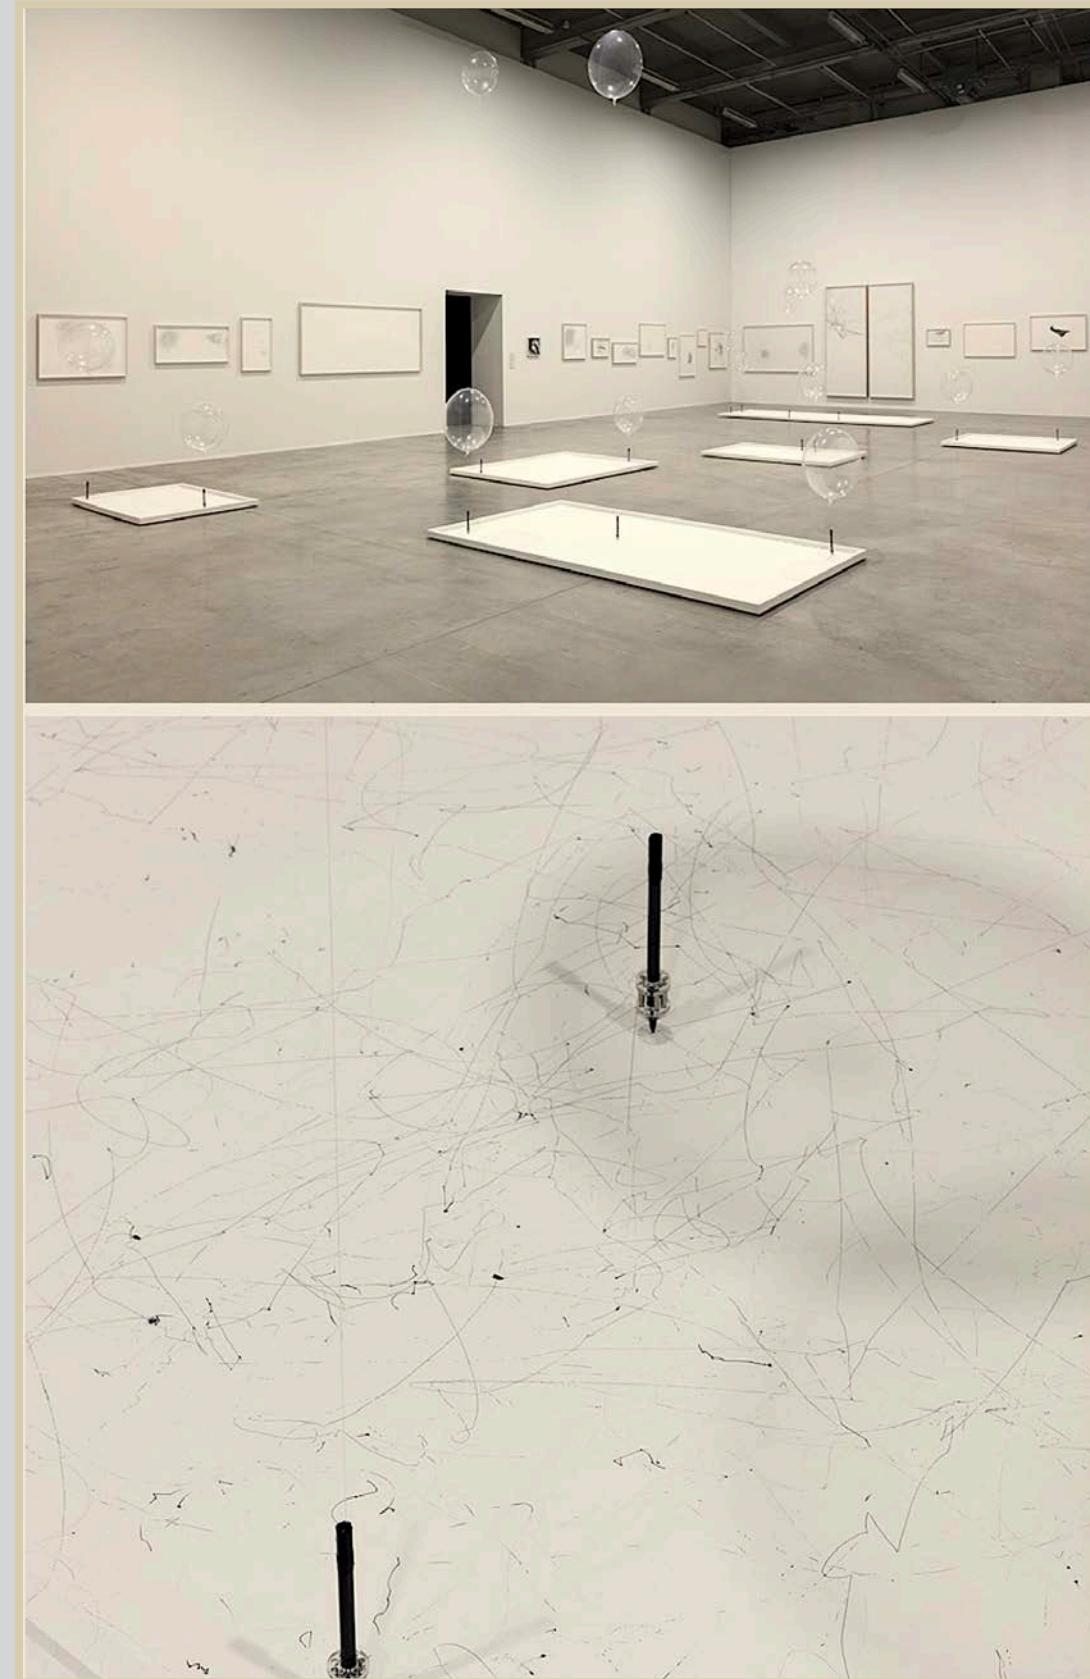

TRACES OF SPACES

Installation view, Traces of Spaces, Vooruit Art Centre, Gent, Belgium, 2011

Tomás Saraceno, Aerographies

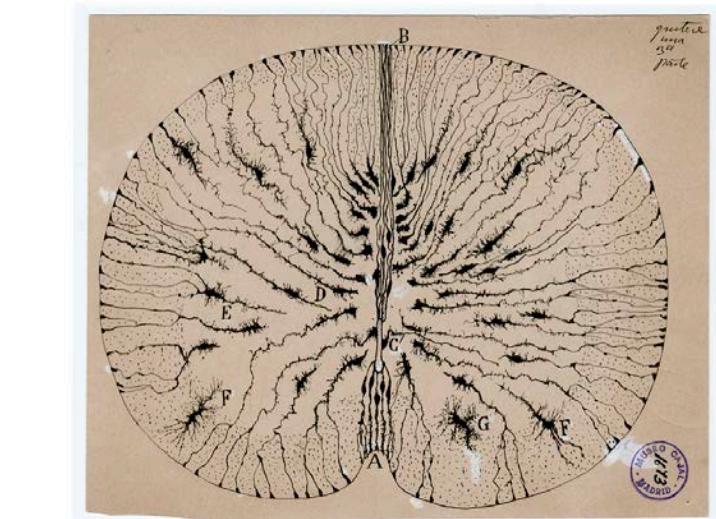

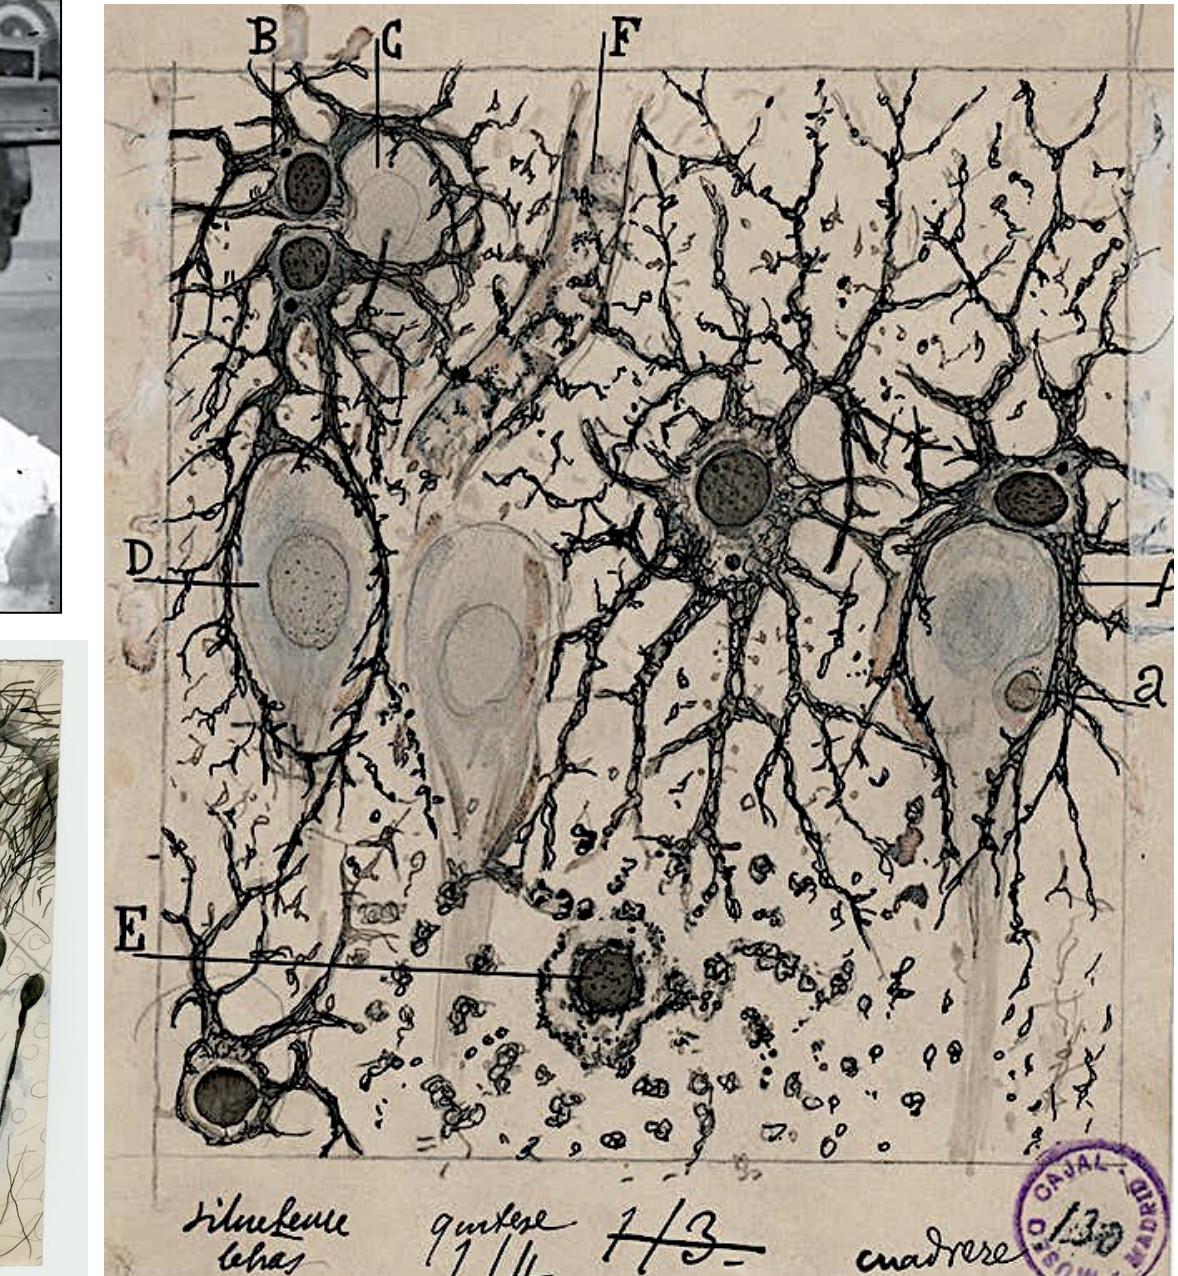

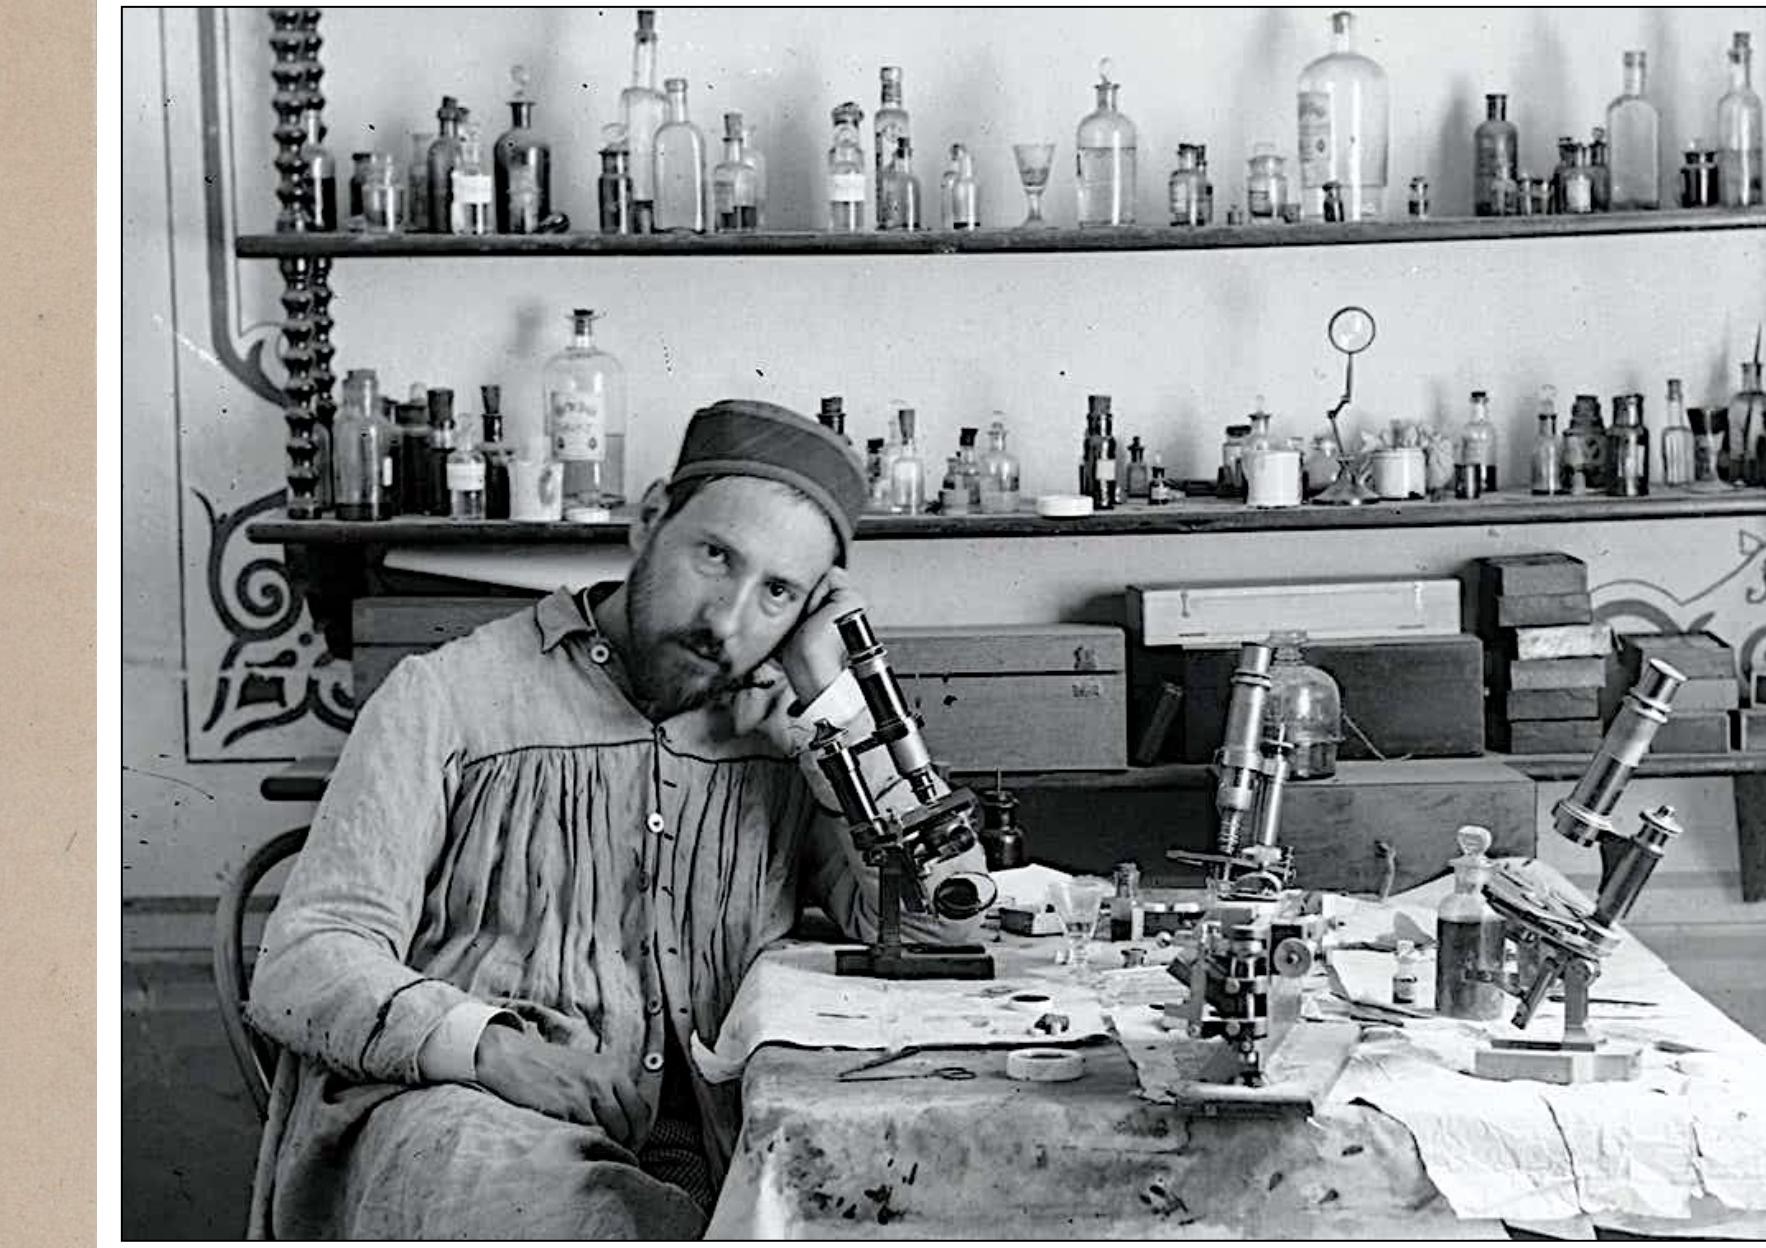

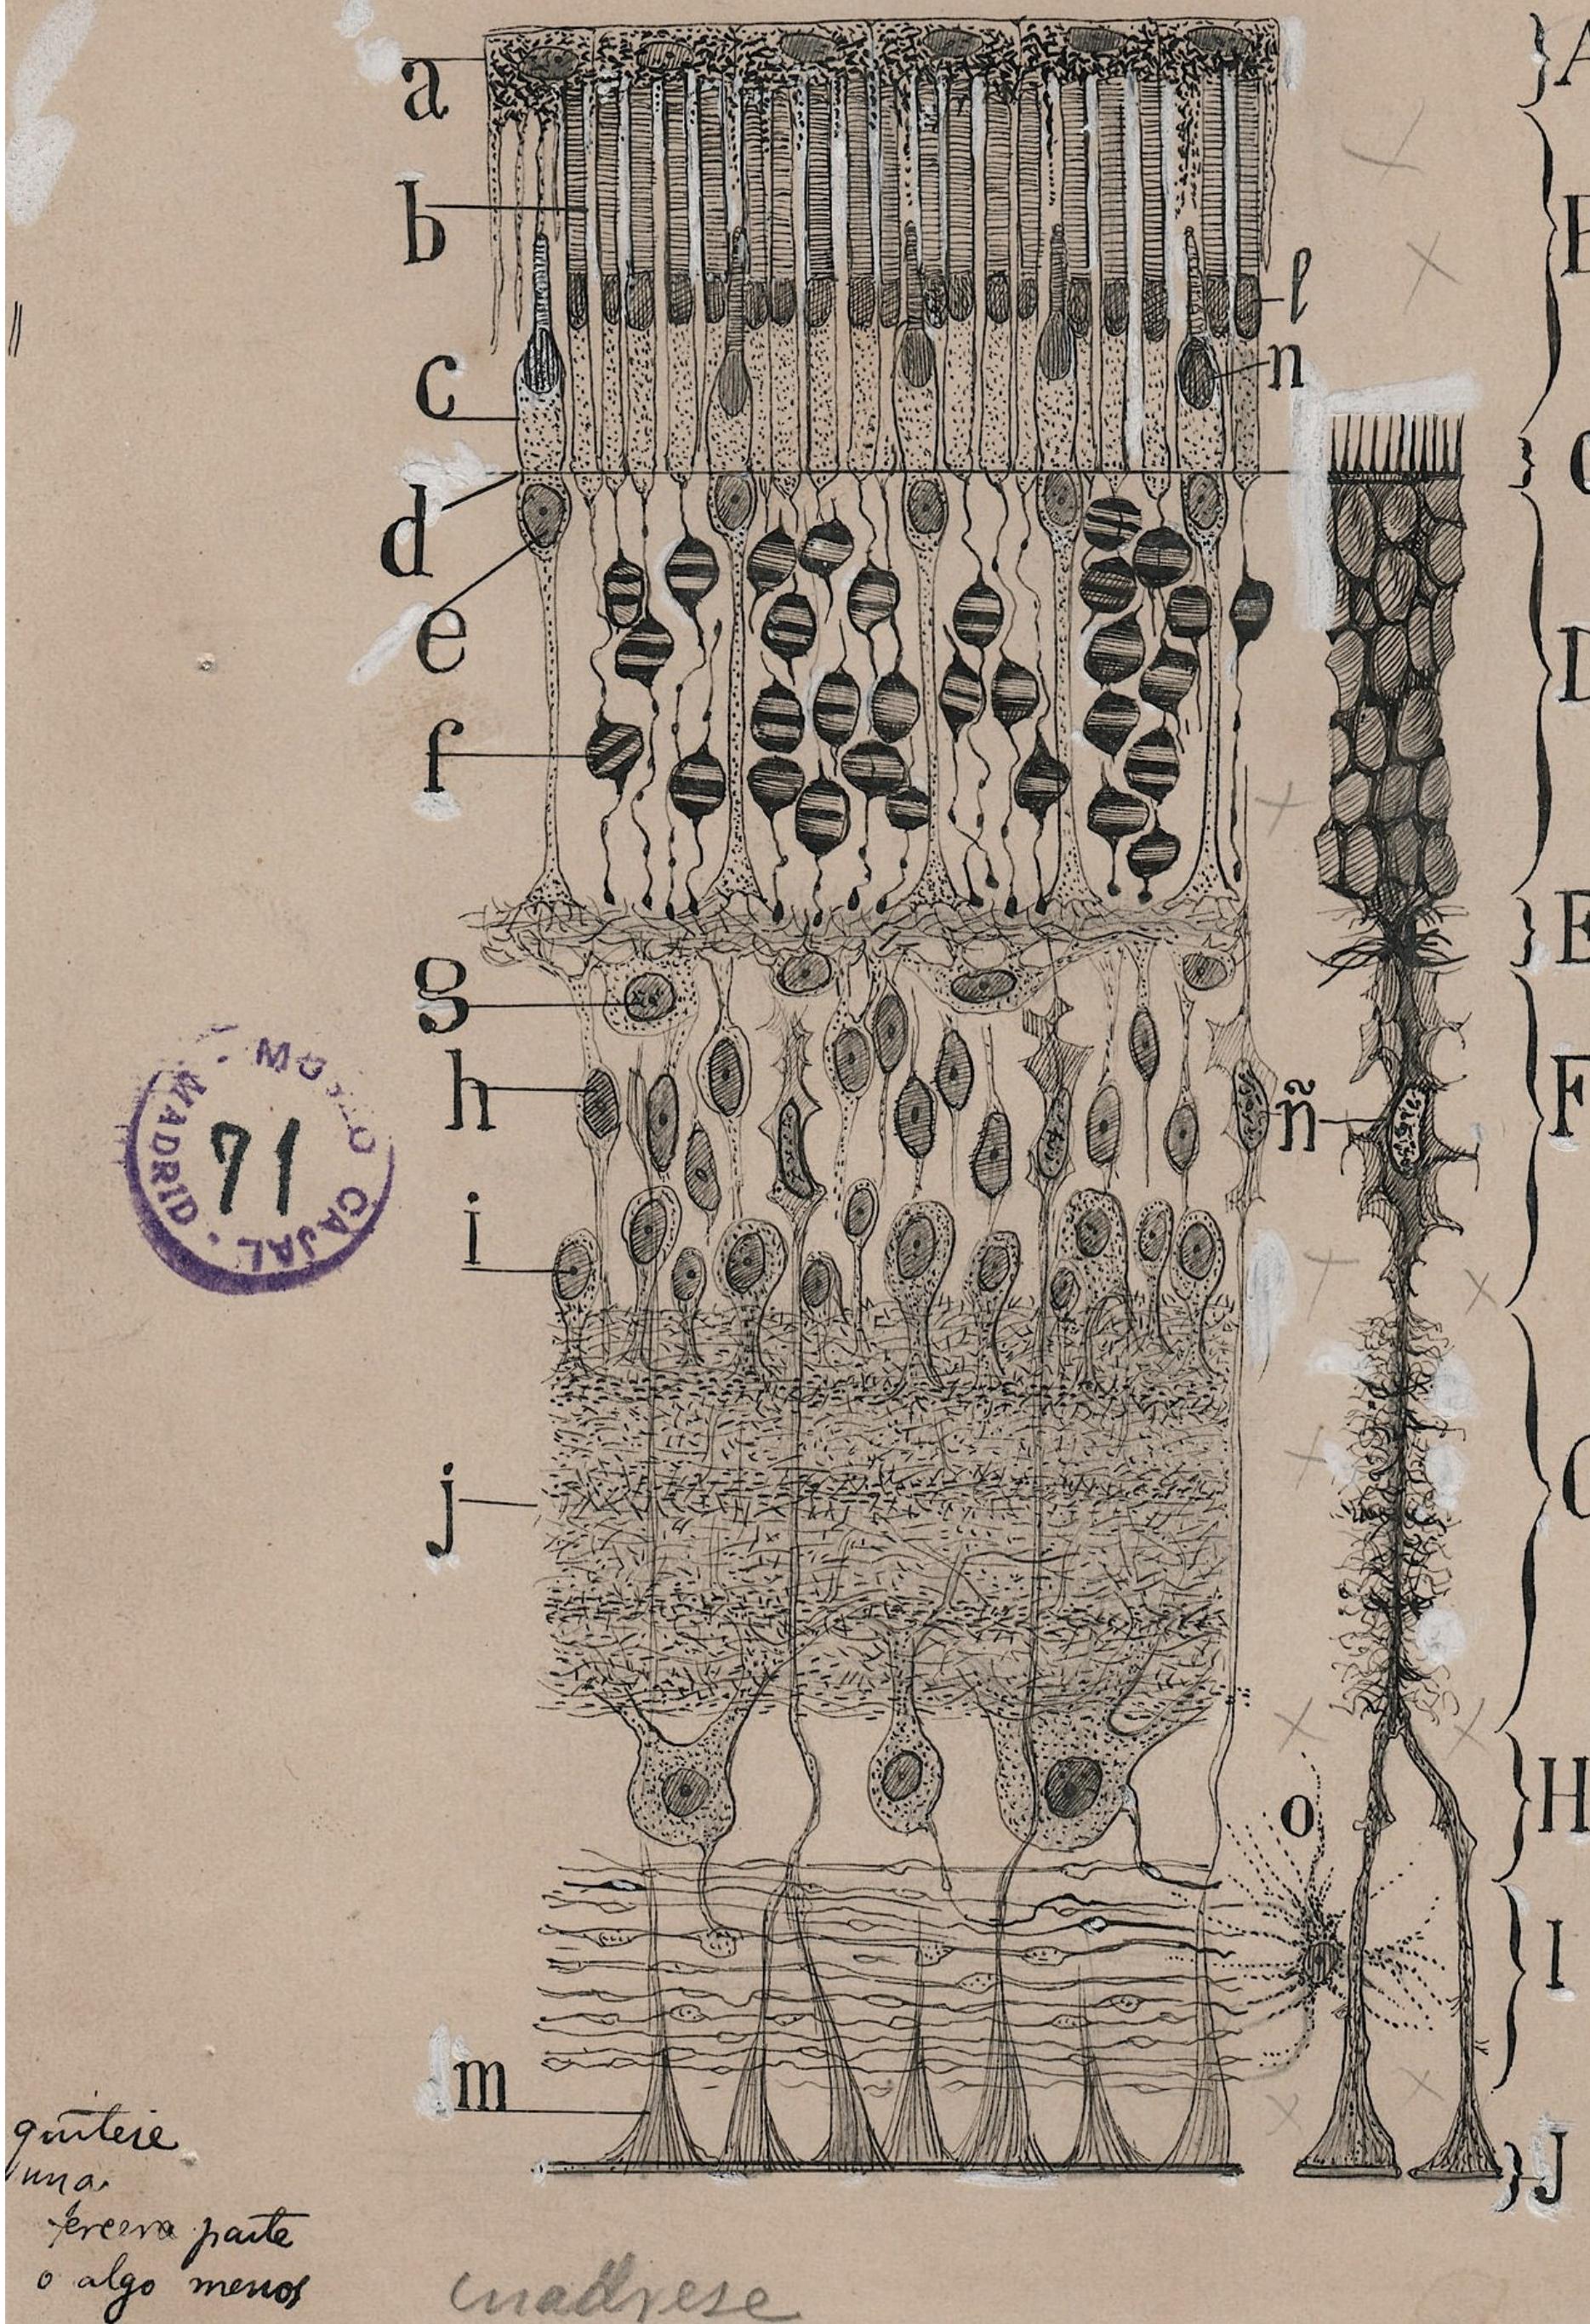

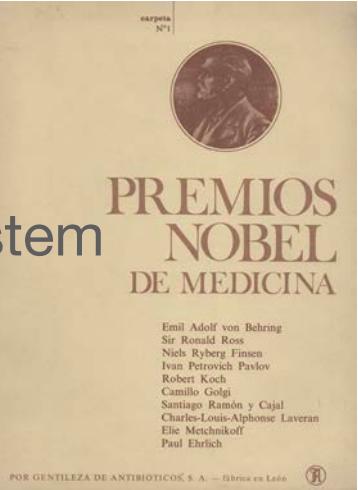

A project for several mapping stations in and outside.

The artist Nikolaus Gansterer has a deep interest in the links between drawing, thinking and action. While having had an ongoing practice of mappings and diagrams, in his recent project he is focussing on the exploration of expanded drawing.

Is it possible to let the inherent dynamics of space be recorded, mapped and drawn by themselves? Therefore, dynamic things in public space such as trees, wind, insects, etc., are tested to become drawing tools, capturing unique described movements. Thus, for example, a writing tool suspended inside hardware inscribes on a paper the wave movement of a canal, drawing instruments held on stretched ropes are pressed onto paper by birds sitting on the ropes, papers attached to street cars brush through the city or even plain papers get buried in the park becoming a test field for microbial activities: All of these experiments offering a very specific insight on the otherwise invisible traces of the urban spaces. Each of the drawing stations distributed in the city is its own performative spot at which the observer can follow the process.

F. le receptacle avec le fruit. Fr. bacca pedicellata f. 3 a
dom effecta. Caulis iniuxo formatio flavescentia laetitia vici.
des. ~~long~~ ^{long} de fruit ornante à l'exceptio des feuilles et
truncus de suffice, partie à l'exceptio des feuilles et
abstra des plenipotentiary. Le fruit ne tenait pas avec
feuilles. Le raceme venait pres. On voit a sonce
trouvé et non portant les fruits d'un autre et les
feuilles d'un autre, et affirment que les feuilles et
racine non cueillies. La effondrance qui on le brisé incou-
rante avec les Dignorae, le plus de toute
la boîte des Vijuco avec fait varie la peltate
des autres Alonso nous ont fait emporter la peltate
donc le raceme nous fournit suffisamment la feuilles. Nous le avons
couper à ce sujet. Ayant nous nous fournis suffisamment la feuilles. Nous le avons
trouvé abondant chamaephyte des racines pouvant appartenir que, il appartenient
l'intérieur. des long glandulaires. Pour des plus sur ce nom
à un plant formant des tiges et feuilles. Pour des plus sur ce nom
cette les dantes que M. Toffalla a nommé nous avons écrit à M. Chica
a fin qu'il nous envoie des fleurs tout avec feuilles. R. d'ailleurs
il pourront avoir quelque sorte pour les fruits et en ayant en avoir plusieurs
sur les feuilles. Le Vijuco de Moyobamba est abondant sur une
partie que celle de la Pica, toute la tige flave et peltata. Il se détache
des feuilles U enroule, le deux appartiennent à des Dignorae. Si on avait voulu nous
trouver connexe à Moyobamba et à la Pica avant on pris des plantes aussi analogues
que des cette même analogie se répandent par le vertus venenoses des deux !
Pour faire le Vina de Moyobamba on prend la quantité des Vijuco Ambibasca dont on a
besoin pour la quantité de vin que l'on veut faire, on le jile (peu sucre) et malaxer
la tige feuilles et tout, on y mette les racines dans une Tabernanthe, Sanango (Mr O
falla dit qu'à Huancayo la nomme une Tabernanthe, Sanango) et le jile
de tout cela le cuire. Avant de porter le jile à l'évaporation (a dor de
grante) on le passe en la filtre. Partie et filtre on y joint un
pan d'argile de Petreto (au coquille très petit mais des plus solides et rigides)

**Fruit of the creeper bejuco de ambihuasca from
Ayobamba (Viceroyalty of Peru), 1802**

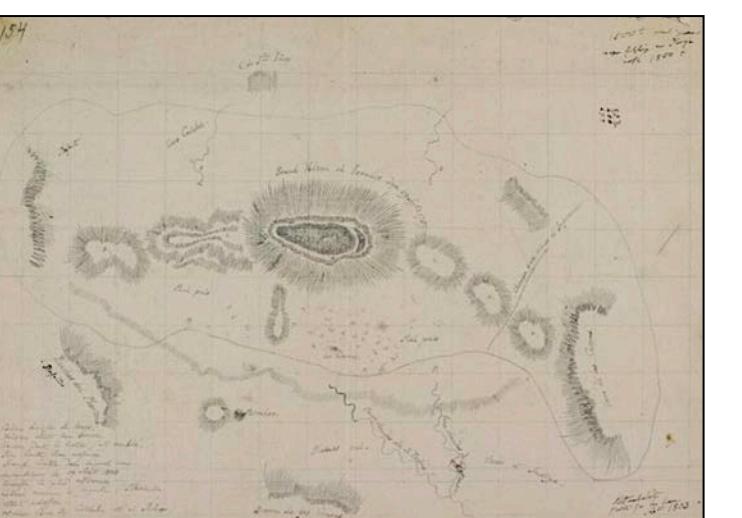

on paper, 307 x 206 mm. Diary VIIbb & VIIc, p. 180, 107 v

detailed multiperspectival study of the fruit of the liana *bejuco de ambihuasca*, which Humboldt asked José Ignacio Chica, governor of the province of Jaén, to send him. A species of the poison curare is made from this plant. In the text, Humboldt describes sketches and his method of analyzing the fruit: "Cut horizontally, it resembles a cut across the Bauhinia, woody rings or eccentric rays, all originating at the same point. Much medullary substance between each fiber. Furthermore, the stringy rings are divided into three concentric areas separated from one another by the medullary substance. [...] 1 the receptacle with a fruit. F. 2 berry on a stem. F. 3 cut up in the middle."

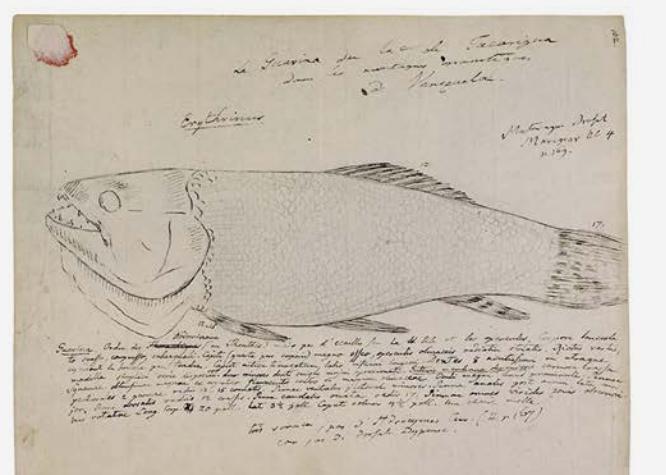

. . . En aquel Imperio, el Arte de la Cartografía logró tal Perfección que el Mapa de una sola Provincia ocupaba toda una Ciudad, y el Mapa del Imperio, toda una Provincia. Con el tiempo, estos Mapas Desmesurados no satisficieron y los Colegios de Cartógrafos levantaron un Mapa del Imperio, que tenía el Tamaño del Imperio y coincidía puntualmente con él. Menos Adictas al Estudio de la Cartografía, las Generaciones Siguientes entendieron que ese dilatado Mapa era Inútil y no sin Impiedad lo entregaron a las Inclemencias del Sol y los Inviernos. En los Desiertos del Oeste perduran despedazadas Ruinas del Mapa, habitadas por Animales y por Mendigos; en todo el País no hay otra reliquia de las Disciplinas Geográficas.

Suárez Miranda: Viajes de varones prudentes, libro cuarto, cap. XLV, Lérida, 1658.

. . . In that Empire, the Art of Cartography attained such perfection that the map of a single Province occupied an entire City, and the map of the Empire, an entire Province. In time, these excessive Maps did not satisfy and the Schools of Cartographers built a Map of the Empire, that was of the Size of the Empire, and which coincided point for point with it. Less Addicted to the Study of Cartography, the Following generations understood that that great Map was Useless and notwithstanding Pitilessness they delivered it to the Inclemencies of the Sun and the Winters. In the Deserts of the West endure broken Ruins of the Map, inhabited by Animals and Eggars; in the whole country there is no other relic of the disciplines of Geography.
